## Introduction

The Music Player App is a cutting-edge smartphone application designed to elevate the music listening experience. Our objective is to offer a feature-rich music player with seamless playback, extensive audio format support, and intuitive controls. Music enthusiasts seeking a reliable and versatile platform to organize and enjoy their music libraries will find everything they need in this app.

## **Problem Statement**

- Limited Support for Formats in Current Players: Many existing music players
  only accommodate a limited number of audio formats, restricting users from
  accessing their entire music library, especially if they have files in less
  common formats like FLAC, OGG, or AIFF.
- Poor Library Management: Inadequate library management tools in current music players make it difficult for users to efficiently organize their music collections, resulting in limited options for creating playlists, modifying metadata, and managing tracks
- Lack of Offline Playback Options: Several music player apps require a constant internet connection for streaming or playing music, which poses a challenge for users when they are traveling or in areas with poor internet connectivity

# **Objectives**

- Develop a versatile music player application that addresses the common limitations of current music players.
- Aim to eliminate the need for users to convert their music files by providing support for a wide range of audio formats, ensuring audio quality preservation and enhanced user convenience.
- Robust library management features will be integrated to facilitate playlist creation, metadata editing, and efficient music collection management.
- The app will boast an intuitive and engaging user interface, promising a seamless and enjoyable user experience.
- Additionally, offline playback capabilities will be offered, enabling users to access and enjoy their music library without an internet connection, ensuring a reliable and fulfilling music experience anytime, anywhere.

# App explanation

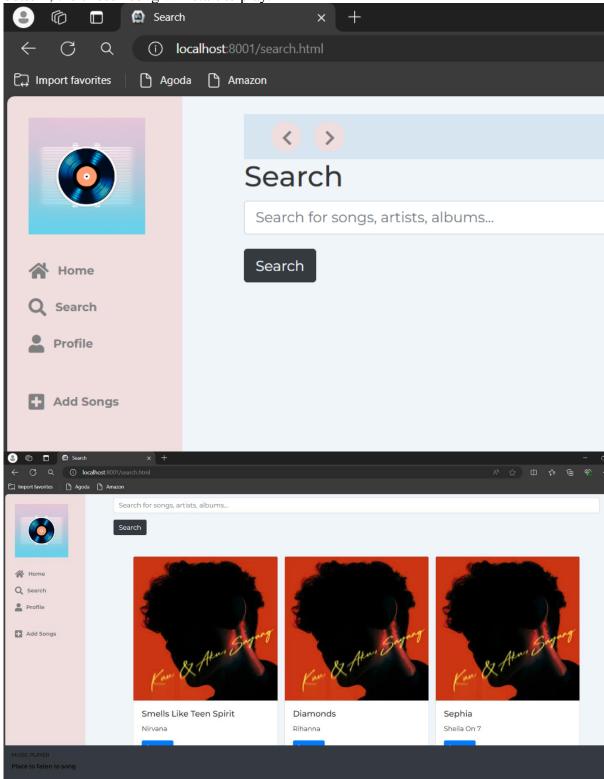

#### Home page

Every music that the user has added to their playlist is listed on this page. There is a grid arrangement for the songs. The sidebar, which has access to Home, Search, Profile, and Add Songs, allows users to move about the app. The navigation buttons, previous and next, are located at the top. An audio player that plays the chosen music when clicked is located at the bottom. By selecting "Add Songs" from the sidebar, users can add new songs.

Music Player - Home CQ (i) localhost:8001/home.html Import favorites Agoda Amazon > < Playlist A Home Q Search Profile Sephia Smells Like Teen... Diamonds Sheila On 7 Nirvana Rihanna Add Songs

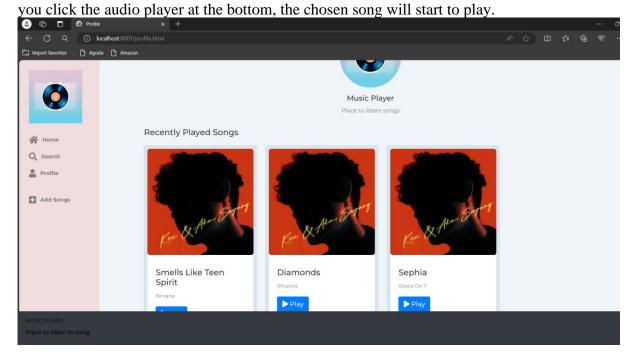

#### Search page

Users can look for songs, artists, or albums on this page. Navigation links to Home, Search, Profile, and Add Songs are available in the sidebar. To find songs, users can type search terms into the input field and press the search button. A grid layout is used to dynamically show the results. When you click the audio player at the bottom, the chosen song will start to play.

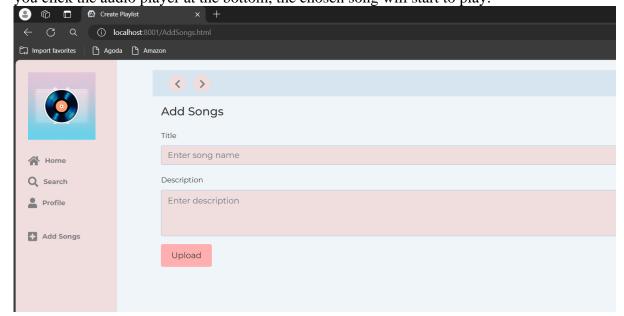

#### Profile page

Recently played songs and profile details are shown on this page for the user. Navigation links to Home, Search, Profile, and Add Songs are available in the sidebar. Using the previous and next buttons at the top, users can go back and forth. The user name, description, and profile photo are all included in the profile section. The songs that have recently been played are shown below in a grid format. When

#### AddSongs page

Recently played songs and profile details are shown on this page for the user. Navigation links to Home, Search, Profile, and Add Songs are available in the sidebar. Using the previous and next buttons at the top, users can go back and forth. The user name, description, and profile photo are all included in the profile section. The songs that have recently been played are shown below in a grid format. When you click the audio player at the bottom, the chosen song will start to play.
